25X1

1. Since January 1950 construction material has been transported to the Jueterbog-Altes Lager (N 52/E 69) airfield on trucks and railroad cars. A strip of woods about 500 meters to the west was cleared after February 1950. * Excavation for the runway and taxiway started in late March 1950. There was no drainage system but the field dried quickly after rainfalls.
2. An E-W concrete runway 60 x 1,800 meters was completed by 15 August 1950. The runway bed, 25 cm deep, was filled with a 10 cm gravel layer which was graded and rolled and topped with a layer of concrete 15 cm thick. The concrete had a mixture ratio of 1:6. An apron, enabling the aircraft to turn around, was constructed at each end of the runway. The aprons were 100 meters square and built in the same way as the runway. **
3. The two aprons were connected by a taxiway, 20 x 2,050 meters, which ran north of the runway. The taxiway, constructed in the same way as the runway, was completed by 15 September 1950. Four roads to the runway and taxiway were under construction.
4. Six hangars and the flight control station were on the northern edge of the field. A fuel dump was in the southwestern section of the field and at the side of a railroad spur track.
5. The construction and expansion work at the field was done by the Bauunion-East Firm, Berlin.
6. The field was occupied by 60 to 80 aircraft prior to April 1950. ***
